Architectural Sculptors

RELIEF ORNAMENT

For Exterior and Interior Decorations

309 FOURTEENTH STREET

WASHINGTON, D. C.

IN issuing this catalogue to our patrons and those interested, we have aimed to present a number of standard designs of capitals, brackets, relief ornaments, etc., selected from our stock models, which will enable the architect or builder to choose those nearest adapted to his requirements in size, and thus obtain at a very moderate cost the desired result.

Architects, in specifying our stock decorations, may be assured that, in addition to the saving of time and labor in making details, our stock designs will in all instances be found correct in style, proportions and modeling, at reasonable prices.

Our ornament is applicable for Exterior or Interior decoration and is manufactured according to the requirements, in Cement, Staff, Fibrous Plaster, Imitation Caen Stone, Papier-Mache and Wood with composition applied.

Staff ornaments, being water-proof, will not shrink, swell, check or decay; the material is of a mineral character, of the nature of Terra Cotta, and not affected by atmospheric conditions. They may be fitted in position by sawing, nailing or screwing, and for Interior or Exterior use may be painted or stained to match woodwork as desired.

For Interior use we have numerous designs illustrated in this catalogue made of fibrous plaster for wall and ceiling decorations; also Papier-Mache and Composition. These, being very durable and hard, are particularly suited to application on woodwork where the effect of carving is desired with natural finish. They can also be painted, gilded or enameled.

We are prepared at all times to submit samples to architects and builders who desire to give our goods a thorough trial, being confident that such a test will prove the merits of our products.

As all works of quality must bear a proportionate price to the skill and cost of manufacture, and those things often called dear are, when justly estimated, the cheapest, we request a careful comparison of our prices with all others, giving due consideration to material, workmanship and construction.

A catalogue naturally being limited, it is impossible to show every design we have, and as we make new designs every day, we cordially invite interested parties to communicate with us. If a design wanted is not found in this book, we have the facilities to execute special work exactly in accordance with particular requirements, and solicit your correspondence.

PLAN OF CORNER CAP

PLAN OF ROUND CAP

PLAN OF PILASTER

PLAN OF SQUARE ABACUS

IONIC ORDER

“A” indicates the diameter of column and face of pilaster capitals.

“B” shows the return of pilaster or corner capitals, which should always be given when ordering.

“C” indicates the core of shaft, which extends through capital and receives the weight of entablature.

Instructions for Ordering

The illustrations on opposite page show the proper method of setting composition capitals, and the relative position of column, core and our material, which also the plans of different forms of abacus will further demonstrate.

All columns for exterior or interior use should have a tenon or core, to run through the interior of capital, and be $\frac{1}{8}$ " longer than the height of the cap, so that all weight will rest directly on shaft of column.

To allow for the thickness of material, this core should be, for caps up to 9" in diameter, $2\frac{1}{2}$ " smaller than top of column. Above 9", add $\frac{1}{4}$ " for this thickness for each 3" of increased diameter. Hence the core for a 12" cap should be $9\frac{1}{4}$ " and that of an 18" cap $14\frac{1}{2}$ " in diameter.

The height of all capitals is taken directly across the face at the center, exclusive of volutes.

The diameter of columns or width of pilaster caps represent the size at neck of shaft, marked "A" on plan. When pilaster or corner caps are desired, give returns or thickness as designated by "B" on plan.

Exterior caps should be flashed with lead or zinc to form watershed.

Interior capitals are made, either of Plain Composition, which may be painted or stained, or of Wood ornamented with Composition, to match any wood or color and show the natural grain; these latter are very desirable for cabinet work or to obtain carved effects. These caps require no core on column, and in ordering state wood and color desired, or if they are to be painted.

Where circumstances permit, it is not advisable to turn columns until the arrival of capitals, thus avoiding possible mistakes.

When ordering, state number or name designated in catalogue, the size at neck of finished shaft, whether round or square, if for interior or exterior use.

In giving shipping directions, state clearly by what steamship or railroad line material is to be forwarded. All our goods are packed by experienced men, in a manner that saves weight and possibility of breakage, thus obviating excessive transit charges and delays caused by damage.
